 Mail Box and Bldg/Room Location: _____ Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

 Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc. if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

PDR Electronic Library™

Stedman's Medical Dictionary 27th Edition**apnea**

Absence of breathing. [G. *apnoia*, want of breath] **central apnea** a. as the result of medullary depression which inhibits respiratory movement. **deglutition apnea** inhibition of breathing during swallowing. **induced apnea** intentional respiratory arrest during general anesthesia produced by hypocapnia, a muscle relaxant drug, respiratory center depression, or sudden cessation of controlled respiration. **obstructive sleep apnea** a disorder, first described in 1965, characterized by recurrent interruptions of breathing during sleep due to temporary obstruction of the airway by lax, excessively bulky, or malformed pharyngeal tissues (soft palate, uvula, and sometimes tonsils), with resultant hypoxemia and chronic lethargy. Symptoms of obstructive sleep apnea are loud snoring, recurrent apneic episodes during sleep followed by gasping inspiration with partial or complete arousal, nocturnal restlessness, and daytime sleepiness. Apneic episodes last 10–120 seconds and may be accompanied by sinus bradycardia or atrioventricular block. The cumulative effect of recurrent spells of apnea is hypoxemia and shallow, nonrefreshing sleep, which may lead to excessive drowsiness, personality change, impairment of intellectual function, and heightened tendency to accidents during waking hours. However, evidence establishing obstructive sleep apnea as an independent risk factor for motor vehicle accidents, heart attack, stroke, and sudden death is weak. About 15% of persons with this disorder develop sustained pulmonary hypertension. Obstructive sleep apnea affects about 4% of men and 2% percent of women between the ages of 30 and 60. Obesity, hypothyroidism, cigarette smoking, alcohol, and some hypnotics (particularly benzodiazepines) predispose to this disorder, and its incidence increases with advancing age. Diagnosis is confirmed by polysomnography (continuous measurement of airflow, respiratory activity, chin electromyography, ECG, EEG, electrooculogram, and arterial oxygen saturation during sleep) and by evaluation of the shape and size of the upper respiratory tract. Weight loss, smoking cessation, and avoidance of benzodiazepine hypnotics are advised for all patients. A mandibular advancement appliance worn inside the mouth at night reduces symptoms in some patients. An effective if somewhat cumbrous treatment is the nightly use of continuous positive airway pressure, which provides a steady flow of room air at low pressure through the nose to overcome intermittent upper respiratory obstruction. Selected patients benefit from surgical procedures such as uvulopalatopharyngoplasty (trimming and reshaping of the uvula and soft palate), which can be performed by laser or radiofrequency ablation under local anesthesia, and mandibular osteotomy with genioglossus muscle advancement. **sleep apnea** central and/or peripheral a. during sleep, associated with frequent awakening and often with daytime sleepiness. Cf.: sleep-induced apnea. **sleep-induced apnea** a. resulting from failure of the respiratory center to stimulate adequate respiration during sleep; divided into respiratory pause (cessation of air flow for less than 10 seconds) and apneic pause (cessation of air flow greater than 10 seconds).

AB A compn. comprising a combination of (a) at least one compd. with agonist activity to the 5-HT4 receptor, (b) at least one compd. with antagonist activity to the 5-HT3 receptor, and (c) at least one compd. with antagonist activity to the 5-HT2 receptor is described. The invention relates to the use of said compn. as a medicament for therapeutic or prophylactic treatment of disorders involving airway constriction in humans or animals.

NOVELTY - Serotonin (5-HT₃) receptors (I), its derivatives or salts are used for treatment of disorders involving airway constriction.

ACTIVITY - **Respiratory**; Antiasthmatic; Antiinflammatory.

MECHANISM OF ACTION - 5-HT₃ receptor antagonist; 5-HT₄ receptor agonist.

Tests are described, but no results are given.

USE - Used for treatment and prophylaxis of disorders involving airway constriction, particularly asthma, emphysema, chronic bronchitis and chronic obstructive pulmonary diseases (claimed).

ADVANTAGE - The compound has the capacity of reducing pathological broncho-contraction by at least 30 (preferably at least 60, especially at least 90)%.

AB WO 9965571 A UPAB: 20000320
NOVELTY - Treating bulimia, disorders mediated by vagal activity,
irritable bowel syndrome, bradycardia or bradyarrhythmia, asthma, urinary
incontinence, **apnea** or **apnea** disorders comprises
administration of (+)**norcisapride** or its salts, free of its
(-)-stereoisomer.

ACTIVITY - Eating-Disorders-Gen.; CNS-Gen; gastrointestinal-Gen;
cardiant; antiarrhythmic; antiasthmatic; uropathic; **respiratory**
Gen.

MECHANISM OF ACTION - Serotonergic.

(+)**Norcisapride** exhibited IC50 values of 0.0054 and 0.38 μ
m at 5-HT1A and 5-HT2 receptors, respectively. In comparison, (plus or
minus) **norcisapride** displayed IC50 values of 7.48 and 2.21 μ M
at these receptors, respectively.

USE - (+)**Norcisapride** can be used for treating bulimia,
apnea (e.g. central **apnea**, deglutition **apnea**,
obstructive **apnea**, sleep **apnea** or sleep induced
apnea), irritable bowel syndrome, urinary incontinence,
bradycardia, bradyarrhythmia, and syncope.

ADVANTAGE - The use of (+)**norcisapride** avoids the adverse
side effects associated with administration of racemic **cisapride**.
